Yeah, AgLogic is looking to have new uses on oranges and grapefruit for aldicarb. After we finished up the carbamate cumulative, the tolerances on oranges at the time were cancelled. It was a smaller driver for the food portion of the cumulative, but a major contributor to water exposure, particular in FL along the central ridge. Not sure how they're going to get around that.

Does this mean they are trying to get a new tolerance if they have a PRIA date? Guessing we will need to add Aldicarb to our list of items for Codex to make sure we are tracking its status.

-Aaron

Hi David – The only thing that happened related to HED work was that they wanted us to run the dietary assessment with a lower PCT based on a production/usage cap they plan to put in place. The rest of the discussion was about the PRIA deadline and how much they need the use. Pretty boring. Mike

I'd be interested in hearing afterwards about what went on. Will you be available?

**Subject:** Meeting with AgLogic

Just FYI – I just got invited by Alex to a meeting at 10:00 with AgLogic on aldicarb. Fun never ends! Mike
